# Honolulu Cosmetic Dentistry Introduces Invisalign Services

*July 05, 2015*

July 05, 2015 - PRESSADVANTAGE -

Honolulu, Hawaii ? Kaka'ako Cosmetic Dentistry has announced the availability of Invisalign services in their clinic for all their patients in Honolulu. This is in line with the clinic?s mission to provide the latest technological advances in oral care for their patients. Kaka'ako Cosmetic Dentistry is a prominent center for cosmetic and restorative dentistry in Honolulu.

?It?s vital that our patients learn the options they have when it comes to orthodontic services,? insists Hawaii dentist, Dr. Gerald Adachi, whose continuous efforts for dental education included a stint as the Chair of the Dental Education Program Committee for the Hawaii Dental Association. ?They don?t have to endure using traditional metal braces when Invisalign clear braces are available.?

The Invisalign process involves the use of advanced 3D digital image technology that helps the dentist create customized clear braces for the patient. A series of these braces are provided for the patient, which are then replaced every few weeks. Gradually, the crooked teeth begin to align properly because of the braces.

?Because Invisalign uses virtually invisible braces, young patients don?t have to suffer from socially awkward

situations in school,? explains Honolulu Invisalign specialist, Dr. Adachi. ?And we may even use it for our adult patients who don?t need the distraction of metal braces in their work.?

Many industry studies and surveys have revealed that a good smile is a crucial part of success in the workplace, especially for those in sales and in the performance arts. With invisible braces, the patients can smile more confidently because no one even notices that they are wearing braces. ?Metal braces are also sometimes difficult for our patients because they can cut the inner cheeks and lips, but that?s not a problem with Invisalign braces,? adds Honolulu cosmetic dentist, Dr. Adachi. ?The smooth contours of the clear braces are a welcome relief from the sharp edges of traditional metal braces.?

Another advantage of the Invisalign braces installed by Kaka'ako Cosmetic Dentistry is that they can be removed and put back on the teeth easily and quickly. That makes them very convenient for eating and cleaning because they have to be removed during those times.

?As any patient who wears braces can attest to, eating when wearing braces can be a nightmare,? says Dr. Adachi. ?But metal braces aren?t all that easy to detach and put back on, which makes meal times and teeth brushing especially tedious.

Aside from Invisalign, Kaka'ako Cosmetic Dentistry also offers a wide variety of cosmetic and restorative options that can help patients gain the great smile they?ve always wanted.

?Patents can just call us if they?re not satisfied with the quality of their smile,? asserts Dr. Adachi. ?We have the technology and the expertise here at Kaka'ako Cosmetic Dentistry to help patients improve how their smile looks.?
