

Window Blinds Can Lower Expenses and Boost Productivity in the Office Says Industry Expert

August 20, 2015

August 20, 2015 - PRESSADVANTAGE -

Melbourne ? Kayton Blinds, the renowned supplier and installer of window blinds and shutters, has advised that offices should install window blinds in order to boost profits. With window blinds, companies can minimize expenses while also boosting office productivity.

?It?s well-known that the sun here in Australia causes a lot of problems for businesses,? admits Kayton Blinds. ?But many of these problems can be solved through the use of our vertical blinds and Roman blinds.?

With the use of window blinds Melbourne businesses can substantially reduce their expenses. This is especially evident when cooling costs are examined.

?It?s not a secret that in Australia a lot of money is spent on cooling costs because of the intensity of the sun,? reveals Kayton Blinds. ?But with the use of the Venetian blinds, many businesses have found that they can reduce their cooling expenses by as much as 20%.?

Window blinds work by allowing users to regulate how much sunlight passes through the window into the

room. This means that in some cases enough sunlight can be let in so that there is no use for artificial lighting. At the same time, enough heat can be prevented from coming in so that air conditioning units are not overworked in cooling of the offices.

‘What’s great about these window blinds is that they offer substantial savings but you don’t need to spend too much money on them,’ assures Kayton Blinds. ‘Our blinds, for example, are very affordable, and yet they’re so durable that they can last for a very long time.’

They are usually made of materials that block UV rays, and this helps prevent skin cancer that’s affecting more and more Australians every year. With almost half a million people receiving treatment for skin cancer, the use of window blinds can also be a measure to increase office productivity.

‘From a purely business point of view, it makes perfect sense to prevent office workers from getting skin cancer and this can be done by installing window blinds,’ asserts Kayton Blinds. ‘The business benefits because the workers are not taking time off for treatments for their skin cancer, so they can work instead of taking sick leave.’

Office productivity is also boosted by window blinds because they reduce minor annoyances that hamper their ability to get work done. It’s very easy to use window blinds to regulate the amount of sunlight that gets in, and that helps as well.

‘With window blinds, office workers can adjust them so that they don’t have to suffer from glare from the windows while they work,’ explains Kayton Blinds. ‘And of course, its ability to block out the heat of the sun helps office workers feel more comfortable inside their office, and their comfort means greater productivity.’

Window blinds come in a wide variety of types, materials and colors. They can be used effectively to make an office feel more appealing, and this improvement in aesthetics can also affect office productivity.

‘Everybody knows that people work better in an office that looks stylish and appealing, instead of an office that’s drab and depressing,’ says Kayton Blinds. ‘When their surroundings look great, people are invigorated, and that means more profits for the company.’
