

# Research Shows That Tea Tree Oil May Be Beneficial for Healing Toenail Infections

April 24, 2018

Irwindale, California based Perfect Nail Solution has recently highlighted the fact that tea tree oil may be effective as a [natural fungus treatment](#) as a part of their toenail fungus awareness campaign for 2018.

Allen Farrer, a spokesperson for the company, says: "Oral treatments for toenail fungal infections are notorious for being expensive and causing dangerous side effects to the people using this treatment. It is for this reason that we have developed our new formula, replete with completely natural products, to treat [fungal infections](#) effectively."

The use of tea tree oil can be attributed to its successful use in the treatment of toenail infections. In a study published by the National Institute of Health, 117 participants of a study were used to measure the effectiveness of 100% tea tree oil solution in comparison to 1% clotrimazole in treating onychomycosis i.e. nail infections. The results were found to be comparable, with 60% of the patients responding to a tea tree oil treatment as compared to the 61% that were positively affected by the clotrimazole.

Perfect Nail Solution has developed a unique 2 step anti-fungal treatment for toenail and fingernail infections and is made using essential oils such as lemon oil and tea tree oil to provide a natural remedy for nail onychomycosis. Those interested in learning more about the ingredients contained in Perfect Nail Solution can get a complete list of essential oils used on the company's official website. This tea tree [foot soak](#) is available for purchase at their Amazon storefront.
