

# Holistic Dentist In Utah Finishes Teaching Session 4 In Holistic Dental Education Series

October 03, 2018

Dr. Judson Wall, from [Bountiful Utah based Dental Solutions, Inc.](#), has announced that he has finished teaching session 4 in his Holistic Dental Education Series. The Series is designed to teach dentists how to integrate holistic principles into their dental practices. The first three sessions tackled: testing and diagnoses; TMJ and craniofacial pain; and cavitation treatment/zirconia implant placement. Session 4 was about the use of lasers in holistic dentistry.

Dr. Wall himself says, "In session 4, I taught cavity removal, teeth sensitivity reduction, snoring reduction, wrinkle removal, oral surgery and much more, using the Fotona Lightwalker dual wavelength laser to dentists from across the country here at my dental center in Bountiful, Utah."

[Internationally renowned cavitations surgery specialist, Dr. Wall](#) offers various kinds of dental treatment. He provides an effective treatment for dental cavitations designed to enhance oral health and decrease pain. A cavitation is a hole that is found in the bone in the jaw. This is usually located where a tooth had been extracted and the bone had not filled in properly. This is often due to periodontal membrane being left behind, resulting in incomplete healing of the bone.

Dr. Wall explains, "Getting treatment for cavitations in the mouth can reduce pain and eliminate toxins that may be spreading throughout the area. This treatment can improve conditions and provide relief for various issues, such as chronic sinusitis, facial neuralgia, phantom toothache pain, trigeminal neuralgia, migraines, and headaches."

In his natural holistic dentistry practice, Dr. Wall focuses on a number of categories. These include how the inside of the mouth, such as teeth, gums and bone, can affect the health of the whole body. For this, the dentist evaluates nutritional deficiencies; examines areas of decay and infection; looks at the toxic materials in the mouth; assesses functional abnormalities like sleep apnea and TMJ; improves digestion; treats decay, toxic materials and infection; restores teeth with mercury-free dentistry; replaces missing teeth using non-metal implants; and uses massage therapy and essential oils.

The holistic dentistry practice also has to do with the effective treatment of dental cavitations. This is important for the health of the whole body. Dr. Wall explains, "Inside a cavitation, anaerobic bacteria flourish and deviant cells multiply. Cavitations act as a breeding ground for bacteria and their toxins. Research has shown these bacterial waste products are extremely potent and result in digestion problems, chronic fatigue, general feeling of malaise, and other chronic health problems. Cavitations can also cause blockages on the body's energy meridians and can exert far-reaching impact on the overall system. Investigation has revealed that some cavitations are reservoirs of huge amounts of mercury. Cavitations may be a source of low level or high level stress on the entire body."

The holistic dentistry practice of Dr. Wall also includes the safe removal of mercury. This is because removing amalgam fillings without using the appropriate precautions can be dangerous. This is

because mercury is extremely toxic to humans and the amalgam filling is usually about 50 percent mercury. Naturally, it is vital to get rid of these mercury in the mouth in order to prevent potential health problems. However, the dentist must be properly trained in this process or else the mercury might be ingested by the patient or it could be transferred to another part inside the mouth and ingested later on.

Another important component of Dr. Wall's holistic dentistry is the use of non-metal dental implants. Dental implants are recommended for the replacement of missing teeth. These implants require screws for attachment to the jaw bone. However, Dr. Wall wants to avoid metal implants to avoid health problems and in order to have the best biocompatibility. Thus, he prefers to use zirconia implants. These have been found to be reliable and are aesthetically pleasing as replacements for missing teeth.

Dr. Judson Wall has been in practice for more than 15 years. He graduated from the University of Utah and obtained his Doctor of Dental Surgery from the West Virginia University School of Dentistry. He has a Fellowship with the American Academy of Craniofacial Pain, an Accreditation by the International Academy of Oral Medicine and Toxicology, a Fellowship with the Academy of General Dentistry (AGD), and an Associate Fellowship with the World Clinical Laser Institute. He is also world renowned as a lecturer who teaches and trains dentists about zirconia implants, metal-free dentistry, sleep appliance therapy, and TMJ dysfunction. He is also a peer reviewer of AGD articles.
