

# Dentist Hosts Session 6 Of Holistic Dental Education Series

November 05, 2018

Dr. Judson Wall, a dentist from Bountiful, Utah based [Dental Solutions](#), Inc., has announced that he has hosted session 6 of his Holistic Dental Education Series on October 27 to 28, 2018. This Series is designed to teach dentists how to integrate holistic principles into their dental practices. Session 6 was about orthopedic development, orthodontic intervention and obstructive sleep apnea.

Doctor Wall says, "I'm glad that we've completed Session 6 in our Holistic Dental Education Series. The topics discussed are essential because problems with growth and development of the orofacial complex contribute to a significant etiology of head and neck problems, including headaches, TMJ disorders, malocclusion and obstructive sleep apnea. It is imperative that oral health care providers be aware of warning signs early on in a child's life."

[Dr. Wall](#) has pointed out that some of the early indications of problems with the head and neck are: food sensitivities, skin problems, digestive issues, irritability, snoring, no room for baby or permanent teeth, long facial development, poor cognition or trouble in school, open mouth posture when breathing, skinny snares of the nose, daytime sleepiness, and high palatal vault.

The holistic dentist explains, "When caught early, lives can literally be saved! Diet modification, food elimination and reintroduction, homeopathic therapy, jaw development, ozone therapy, and orthodontic therapy can all help to return normal function to an otherwise oxygen-impaired individual."

The holistic dentist also pointed out that for adults, similar treatments can also be effective, even if most of the growth and development has already been completed. Some of the possible treatments are laser collagen modification or [Nightlase](#), oral sleep appliances, diet modification, and oral physical therapy can provide more oxygen to patients while they're sleeping.

Meanwhile, Dr. Wall, who is a world-renowned cavitations surgery specialist, provides different kinds of dental treatment. He offers an effective treatment for dental cavitations that is designed to reduce pain and improve oral health. A dental cavitation is a hole that is located in the bone in the jaw. This usually occurs at the site where a tooth had been extracted and the bone had not filled in correctly. This is often the result of periodontal membrane being left behind, resulting in incomplete healing of the bone.

Providing a natural holistic dentistry practice, Dr. Wall zeroes in on several factors, including how the inside of the mouth, like the teeth, gums and bone, can negatively impact the health of the entire body. Thus, the dentist takes a look at nutritional deficiencies; examines the toxic materials in the mouth; searches for areas of decay and infection; remedies decay, toxic materials and infection; evaluates functional abnormalities such as sleep apnea and TMJ; offers ways to improve digestion; restores teeth using mercury-free dentistry; applies massage therapy and essential oils; and replaces missing teeth with non-metal dental implants.

The holistic dentistry services offered by Dr. Judson Wall also include the safe elimination of mercury

from the mouth. The removal of amalgam fillings, which contain mercury, without taking the proper precautions can be dangerous. Mercury has been found to be extremely toxic to humans and the amalgam fillings that have been previously used in dentistry are usually made of 50 percent mercury. Thus, it is essential to take these mercury-filled fillings out of the mouth to avoid potential health issues. To do that, the dentist must be appropriately trained on how to do it or else the mercury could be ingested by the patient or could be transferred to a different part of the mouth and ingested later on.

Another treatment that Dr. Wall specializes on is the replacement of lost teeth with non-metal dental implants. Most practices use metal screws for attaching these implants to the jaw bone. However, Dr. Wall believes that metal implants can cause health problems and are deficient when it comes to biocompatibility. Thus, he makes use of zirconia implants instead. Such non-metal implants have been observed to be more attractive and reliable as replacements for missing teeth.

Dr. Judson Wall has been practicing dentistry for over 15 years. He obtained his BS diploma from the University of Utah and finished his Doctor of Dental Surgery at the West Virginia University School of Dentistry. He is a Fellow of the American Academy of Craniofacial Pain, an Accreditation by the International Academy of Oral Medicine and Toxicology, and the Academy of General Dentistry (AGD), and an Associate Fellow of the World Clinical Laser Institute. He has served as a lecturer in various countries, teaching and training dentists regarding metal-free dentistry, zirconia implants, TMJ dysfunction, and sleep appliance therapy. Also, he has served as a peer reviewer of AGD articles.

Those who want to get more information about Dr. Wall or Dental Solutions Inc. can visit the practice's website.
