

ManageByStats Launches New MBS Mobile App

November 05, 2018

Today ManageByStats released their new mobile app for Android. The Apple version will be released in the coming weeks. The mobile app, MBS Mobile, is designed for mobile devices and gives users a way to manage their Amazon business while on the go. The current version of the app provides Dashboard functions from the main suite of tools, and connects directly to the user's MBS account. [ManageByStats](#) is a suite of software tools for Amazon sellers, which provides resources and services for the management of an Amazon business.

"Mobile in this arena is huge," says ManageByStats CEO, Philip Jepsen. "It hasn't been done in a big way, and in most cases if users want to get information on the go they have to view mobile-optimized browser windows -- which really isn't the best way to work on a small device. Now, with MBS Mobile, users can work in a true app designed for the mobile environment."

MBS Mobile provides Dashboard information from ManageByStats. The user connects to their MBS account, and are able to see all Dashboard information, laid out and configured exactly as they have it arranged in their [MBS](#). Dashboard info includes things such as KPIs (Key Performance Indicators), graphs, sales stats, payouts, restock alerts, SellerMail (email auto-responder) and more.

"Transparency of vital business information is a big part of what MBS is all about," says Mister Jepsen. "Awareness, and now our users can have that awareness anywhere, any time. With their phone or other mobile device they can pull up MBS and check on the key aspects of their Amazon business."

For more info on the new MBS Mobile and its features, please contact ManageByStats or visit the company's [website](#). If interested parties have further questions, ManageByStats may be contacted directly by email.
