

An Oasis Of Healing Patient Gives Testimonial On Surviving Hodgkin's Lymphoma

November 28, 2018

An Oasis Of Healing, an alternative cancer treatment center in Mesa, AZ, is pleased to announce that they have received a brand new testimonial from a patient who got [treatment for Hodgkin's lymphoma](#) and was healed of the disease. After getting diagnosed with stage 2 Hodgkin's lymphoma in April 2018, Adam started making lifestyle changes after being advised by his wife Valarie, who is an acupuncturist and is knowledgeable about alternative healing methods. He later checked in at the center and stayed there for 10 weeks. He revealed that when he got another PET scan in August 2018, the results showed that the cancer was totally gone.

Clothilde Canale from An Oasis Of Healing says, "We are truly glad to have received this brand new testimonial. Adam's journey is just one of many 'success' stories. But the success is not just about healing from cancer. At An Oasis of Healing, the true measure of success is keeping cancer away through holistic and sustainable lifestyle changes rooted in a comprehensive cancer care program."

Clothilde explains that the program was developed by An Oasis Of Healing founder Dr. Thomas Lodi. The program is custom-fitted for each patient and its goal is to strengthen the body so that it reaches a state of health such that the body will no longer be conducive for cancer. Furthermore, during the process, patients develop a different perspective on health and wellness.

Hodgkin's lymphoma is a cancer of the lymphatic system, which forms part of the immune system. For people with this condition, cells in the lymphatic system grow abnormally and possibly spread to other parts of the body. Signs and symptoms of Hodgkin's lymphoma include fever, persistent fatigue, painless swelling of lymph nodes in the groin, armpits or neck, severe itching, unexplained weight loss, night sweats, and increased sensitivity to the effects of alcohol, or pain in the lymph nodes after drinking alcohol.

After checking in at the center, Adam and Valarie realized that it was indeed a refuge for them. Adam notes, "We pretty quickly started making friends and meeting the other patients. The doctors, the nurses, and the whole staff were wonderful. I couldn't ask for a better-personalized experience." Valarie adds, "It felt like family. We met with the doctors right away and we had a really great vibe about how the treatment was going to go."

Even before getting the PET results showing that the cancer was gone, Adam had made a resolve to continue with his new and healthier lifestyle because he now truly understands its long-term effects. And for Valarie, the fact they were able to bring their spiritual life into the healing process made a significant impact.

Dr. Lodi explains the conditions that lead to cells being transformed into cancer cells. He points out that when toxins accumulate in the body, the cells become overwhelmed by the toxins and are no longer able to protect themselves. And as toxins accumulate further, the mitochondria in the cells get damaged and this eventually leads to changes in the DNA, which in turn causes a mutation. And as

toxins keep on accumulating, many vital enzyme systems in the body are lost due to adaptation. And due to metabolic residue from the mutated cells that have also become anaerobic, an acidic environment develops in the body. At this point in time, the immune system can no longer function properly and then the mutated cells divide and this cell division continues. Eventually the cells lose the capability to store energy.

Dr. Lodi explains that the process to counteract the above is to clean out the toxins, provide proper nutrition for the building of new, healthy cells, and the reestablishment of enough energy pathways. The treatment provided at An Oasis Of Healing is based on this process. They include organic whole foods, wheat grass juices and fresh pressed organic vegetables, oral and IV supplements, colon hydrotherapy, chelation therapy, lymphatic drainage, EWOT (exercise with oxygen therapy), and infrared sauna.
