

Renowned Utah Holistic Dentist Shares Earth Day Message To Avoid Fluoridated Water

May 08, 2019

Utah's renowned holistic dentist, Dr. Judson Wall, of [Dental Solutions, Inc.](#) is pleased to announce the release of their latest blog article that challenges pro-fluoridation evidence. "Earth Day has been celebrated for almost 50 years. This year's theme was to Protect Our Species. What better way to do that than to challenge the media reporting that our water, the very foundation of life, needs to be fluoridated."

Dr. Wall has questioned the benefits of fluoridated water for many years. During an interview last year, he outlined why many Americans are under the mistaken impression that they need to have fluoride in their water. He stated that although a 1950's study in Michigan showed a decrease in the incidence of cavities by 50% where the water was fluoridated, it failed to point out that the incidence of all cavities also decreased by an equal measure in communities that didn't have fluoridated water.

"Celebrating Earth Day reminds us that we owe it to the future to help protect the Earth and our own health. It is time for everyone to realize the real health problems they could be facing by continuing to drink fluoridated water," stated Dr. Wall. He states that dental fluorosis, when the teeth look brown or mottled is actually damaged teeth, which is one of the biggest problems in dentistry. Those who have dental fluorosis will also have bones that become brittle, and with the high incidence of osteoporosis and bone issues, particularly for women, it is time to challenge why fluoridation is needed.

The doctor stated that three other studies found that fluoride exposure during embryonic and suckling stages for a baby impaired learning and memory retention in mice. There are more than 50 studies which have linked fluoride with decreased IQ in children.

Unfortunately, this is not considered a disaster worthy of major network news, and many feel unable to do much about it. Dental Solutions's latest blog article provided a timely insight debunking coverage of a research report published in 2017 for failing to highlight other key issues. News coverage focused on a rise in primary (baby) tooth decay in Calgary, Canada after they stopped their fluoridation program in 2011 failed to report that, "For all tooth surfaces among permanent teeth, there was a statistically significant decrease in Calgary, which was not observed in Edmonton (Edmonton had continued to fluoridate their water supply)," according to Dr. Wall.

Dr. Wall understands that the role of media to draw attention to important health issues is vital, and this was very evident following the release of 'Root Cause' on Netflix and Amazon. The controversial film highlighted several allegations about the possible negative effects of a badly performed root canal on the body. Dental Solutions has seen a huge rise in the number of people keen to learn more about [cavitations](#) and how their oral health can affect their overall health.

Many people across the US and Canada are looking for alternatives to the way they were taught to care for their teeth when they were young. Now that more is known, alternative to chemicals which may be dangerous to overall health in the long term are being sought after more than ever before. Dr.

Wall leads a Holistic Dental education series which enables other dentists to offer holistic dentistry, as a contribution to better ways of serving patients. The educational series includes topics like how to use 3D printing technology in restorative dentistry, use of ozone in restorative dentistry, and many more. Ozone, which has been found to be 8,000 times more bactericidal than chlorine, can be used to disinfect tissues to help them regenerate. It can also be used in the treatment of cavitations, periodontal disease, tooth decay, mouth sores, and other dental issues.

In holistic dentistry, various approaches are used in boosting dental health. However, many people find it difficult to find a [Utah holistic dentist](#) they can trust. They may be seeking a variety of services, from an evaluation of nutritional deficiencies to enhancing digestion, or evaluation of functional abnormalities such as sleep apnea and TMJ disorder. Many people seek holistic dentists for dental restoration using mercury-free options, replacement of lost teeth with non-metal implants, and help with supporting the body with essential oils and massage therapy.

Dr. Judson Wall has been offering holistic dental services for more than 15 years. He obtained his undergraduate degree from the University of Utah and got his Doctor of Dental Surgery degree from the West Virginia University School of Dentistry. He is accredited by the International Academy of Oral Medicine. He is also a fellow at the American Academy of Craniofacial Pain and the Academy of General Dentistry, and an associate fellow at the World Clinical Laser Institute.

Those with a dental issue or who are looking for the latest holistic treatments and approaches to oral health may contact Dr. Judson Wall of Dental Solutions, Inc. to schedule an appointment. Furthermore, the clinic's website also allows visitors to 'Ask the Doctor' anything via a form. Additional contact information and a Google map link to download directions can be found on their website as well, which also includes links to their social media channels and their blog.
