

Dallas Flooring Warehouse Announces that They Offer Hardwood Flooring Installation

July 02, 2019

A 30-year old Dallas flooring and carpet company wants to remind everyone that they offer a complete line of [hardwood flooring installation](#) services. That company is Dallas Flooring Warehouse. They are one of the few discount flooring and carpet warehouses in the Dallas Fort Worth Metroplex that has their own factory trained hardwood flooring installation crews. It's something that makes this flooring and carpet company very different from other large flooring discount centers. It's also a trait that gives their customers a lot of confidence that they are getting their flooring installed properly.

John Stacy, a spokesperson for the company, talked about why any flooring supply company having their own hardwood flooring installation crews is beneficial for their customers. He says, "There are a lot of different choices in flooring in the home marketplace and they do not all get installed the same way. That's why we offer the services of our own crews to put down the hardwood flooring that our customers purchase from us. Our crews only work with what we sell so that makes them experts at installing the types of hardwood flooring we carry in stock. It also helps to make sure that the hardwood flooring that is laid down by our crews gets a full factory warranty backing those products up."

Stacy went on to add that manufacturers many times will not honor their hardwood flooring products

warranties if they are not installed by factory certified crews like theirs. That's not something that anyone wants to take a chance with because any type of wood flooring can have production issues that come up after it's laid down. When their crews do the work, both the installation and hardwood flooring products come with a warranty and satisfaction guarantee.

He also talked about some of the issues that can come up when hardwood flooring is not put down properly. These include such things as too big of gaps left between tile sections and improperly glued wood tiles that become loose shortly after they have been installed. Stacy added that the company has also witnessed wood flooring tile that cups at the edges and sections that buckle up because they were not laid down according to the manufacturer's recommendations.

The company itself is one of the largest flooring discount centers that can be found in the entire Dallas Fort Worth Metroplex. They not only specialize in the sales and installation of [wood floors](#) but they handle many other floor covering types too. These include carpet, ceramic tile, simulated wood tile, porcelain, laminate floors, engineered hardwoods, waterproof flooring, luxury vinyl plank, and many others. Dallas Flooring Warehouse also carries flooring for both home and commercial applications.

Their Dallas flagship warehouse superstore is located at 8717 Directors Row in Dallas, Texas 75247. That makes it fairly easy to get to from both the Dallas and Fort Worth areas. The warehouse superstore can be conveniently gotten to from either I-35 or the John Carpenter Freeway. They are open from 9 am to 5 pm Monday thru Friday and 10 am to 3 pm on Saturday. Dallas Flooring Warehouse also has satellite stores located in The Colony, Grapevine, Allen, and Granbury.

More information on this company's flooring products and installation services can be found on their website. The website also contains such things as Dallas Flooring Warehouse's contact information and a map to their location. There is even a simple to fill out contact form on the homepage. If a customer fills it out and sends it to them a company representative will get back to them shortly to answer any flooring questions they may have. The website also lists such things as their current specials and the financing options they have for their customers.

On their website, a customer can also learn about their popular [engineered hardwood flooring](#). This is an inexpensive alternative to regular wood flooring that is made from composites of wood scraps, strands, particles, and fibers. It gives a similar appearance to real wood flooring at a fraction of its cost.
