

Dental Solutions Provides Laser Dentistry Training Courses For Holistic Dentists

August 20, 2019

Bountiful, UT based [Dental Solutions](#), Inc. recently announced the launch of new laser dentistry training courses geared toward educating holistic dentists in laser dentistry treatments, including nightlase. Attendees will benefit from the instruction of the renowned Dr. Judson Wall, who has dedicated his career to holistic dentistry.

Dr. Wall seeks to share his expertise with other practitioners who are looking for new and improved ways to treat their patients with non-invasive procedures, a practice that has found a resurgence in popularity over recent years. He states that, as far as non-intrusive, patient-friendly procedures go, nightlase therapy offers the most benefits to a patient, given that it can address a variety of conditions that would otherwise require surgery. Patients who do not want to undergo long recovery times, yet still seek a means to effectively deal with their conditions (such as sleep apnea), find that nightlase therapy often holds the answers they seek. Due to this, the doctor is keen to help his peers in the medical field adopt the treatment in their own practices.

"As dentists, we should be always trying to learn new procedures that our patients can benefit from," states Dr. Wall, urging practitioners in the vicinity to attend the training courses he hosts at Dental Solutions. He adds, "By using nightlase therapy to reduce the effects of sleep apnea, we have helped several patients achieve a better quality of life. Restoring healthy sleep patterns has the knock-on effect of reducing disruption to other areas of their everyday lives. This is especially true for any activity that requires dedicated focus, an extended attention span, and so on."

He states that recent research has proven that the [nightlase sleep apnea procedure](#) is among the most effective treatments for this condition. Since it affects 22 million Americans, the most crucial part of this procedure is that it can help patients who suffer either a mild or moderate obstruction of their airways. This prevents the condition from progressing to a more dangerous state where the patient requires surgery after their health is put at risk.

Nightlase therapy consists of three separate treatments administered over six weeks, during which the patient's condition will progressively diminish to an established minimum to guarantee a result that lasts up to a year before the laser therapy treatment needs to be repeated. This procedure offers a long list of benefits to the patient, with some of the most important being an increased standard of safety and the high success rate that it has in treating snoring and sleep apnea symptoms. Additionally, the procedure ensures the patient a high degree of comfort as it does not require the use of sleeping devices and is associated with a rapid rate of recovery.

Dr. Wall has improved the lives of many patients through the use of this treatment, as illustrated by the multiple success stories that the dental care facility has enjoyed since they began offering the service. A recent patient, Jasmine C., states, "Despite having suffered from sleep apnea for over three years, I didn't even know what it was. Needless to say, I didn't even know whether or not it could be cured, or what treatments could be used to cure my symptoms. I was recommended Dr.

Wall by a relative of mine, and I am very thankful that I was referred to him. He did a great job instructing me on what sleep apnea is, and the different options that I had to cure it, or at least reduce the severity of the symptoms I was facing—which had been aggravated over the years. I ended up choosing nightLase therapy and it was great. I saw an immediate improvement once the treatment had finished, and it's all thanks to Dr. Wall. I can't recommend him enough, as he has helped me greatly during these difficult times."
