

Advanpro Offers Furnace Repair And Installation In Calgary

November 12, 2019

[Advanpro - Heating, Cooling, Furnace & Duct Cleaning](#), a business based in Calgary, Alberta, Canada, has announced that they also offer furnace repair and furnace installation in Calgary and neighbouring areas. With regards to furnace installation, they also want people to note that they are a Lennox premier dealer. With the winter season fast approaching, it is timely for people to have their furnaces checked and see if they need to be repaired or replaced. They also want to add that they can provide furnace repair services as promptly as possible at any time. This is because they know that breakdowns in furnaces may sometimes occur at the most inopportune times.

Rhys Evans from Advanpro says, "Our certified, experienced technicians are just a phone call away if you need quick answers or are experiencing a furnace emergency."

The team members from Advanpro include certified and experienced technicians with all the skills needed to handle any kind of furnace installation, including hot water tanks and humidifiers.

Customers will also get a free duct cleaning service for every furnace installation.

Being a Lennox premier dealer, several Lennox furnaces are featured on the Advanpro website. These include the SLP98V from the Dave Lennox Signature® Collection, which is a variable-capacity gas furnace; the EL296V from the Elite® Series, which is a 96% efficiency variable-speed gas furnace; the EL296E from the Elite® Series, which is a 96% efficiency two-stage furnace with Power Saver™ technology; the EL196E from the Elite® Series, which is a 96% efficiency single-stage furnace with Power Saver™ technology; the ML296V from the Merit® Series, which is a 96% efficiency variable speed, two-stage gas furnace; and the ML193E from the Merit® Series, which is a 93% efficiency single-stage gas furnace with constant-torque motor design.

With regards to their furnace repair services, which can be gleaned from the web page <https://www.advanpro.ca/furnace-repair>, their certified technicians can diagnose various kinds of problems. These include the situation when the furnace doesn't turn on; the furnace is running but little or no heat is being supplied; the pilot light won't turn on even after several tries; the pilot-light is yellow instead of blue; the furnace turns on and off over and over again; the furnace blower is running constantly; the furnace is producing a lot of strange noises; the furnace is leaking water or gas; there is a sudden increase in heating costs; the vent airflow is weak; and the thermostat isn't working as expected.

Another important service is furnace tune up, which ensures the furnace operates at optimal efficiency, thus prolonging its lifespan and boosting its safety. For this service, the team from Advanpro will conduct inspections, testing and checking, supply and service, and measurement and recording of various indicators of furnace health. These include the flame sensor amperage, furnace amperage draw, ignitor resistance, blower motor amperage draw, inducer motor amperage draw, gas valve amperage draw, and set gas pressure.

Advanpro also offers furnace and duct cleaning, which ensures that the client gets lower energy bills, improved indoor air quality, and safer and cleaner home. With this service, each appointment involves various tasks. These include the use of a high-volume truck-mounted duct vacuum and air compressors for cleaning the furnace and air ducts; removal and cleaning of the furnace blower motor assembly; cleaning of the drop sheets, register covers, and corner protectors; cleaning of the system in "zones" to make sure that the dust and debris are totally removed from the system; and testing for normal furnace operation, including inducer motor, ignition, and blower motor.

The vents of clothes dryers, especially those used in commercial establishments, also need regular cleaning. It is advisable to schedule vent cleaning at least once a year in Calgary to prolong the life of the dryer, avoid the risk of fires, and improve efficiency. Regular cleaning is essential because lint accumulates inside the ducts. This can clog the ducts and there is also the risk of fire because of overheating.

Those who require furnace installation services in Calgary and nearby areas can check out the web page <https://www.advanpro.ca/furnace-installation/>, or contact them on the phone or through email.
