

Crypto Stashed Offers Guide to the Best Cryptocurrency Exchanges

December 09, 2019

Crypto Stashed has announced that they offer a guide for people who want to know the best cryptocurrency exchanges. With the growing number of cryptocurrency marketplaces, most people are finding it difficult to choose the best cryptocurrency exchange for their specific needs and purposes. Some of the best exchanges, according to Crypto Stashed, are Binance, Coinmama, Bitpanda, eToro, and LocalBitcoins. More information about this can be gleaned by visiting their website at <https://cryptostashed.com>.

Brian Rudderow, owner and CEO of Crypto Stashed, says, “Nowadays there is an entire ocean of cryptocurrency marketplaces out there and new users usually struggle with finding a good place to start buying coins at. Further down the road, they face a similar challenge when they want to sell those same coins as they will have to look for a good exchange site. This is why we offer a guide on some of the best cryptocurrency exchanges and marketplaces out there in an attempt to help new users better find their perfect match in the constantly developing crypto world.”

Cryptocurrency markets are usually in the form of websites and at present, there are hundreds or even thousands of them. Unfortunately, many of these marketplace sites cannot be trusted and some even have a shady history while others are still new and have not yet proven their worth. An exception can be found in Binance. While it is one of the newest sites, it was able to develop a good reputation quickly as people discovered that it can be trusted. One rule of thumb is that if a site has a large following, it is a good sign. This is because bad news travel fast and if there are any problems encountered by some customers, these can easily destroy a site’s reputation.

Crypto Stashed suggests a number of factors to look for when choosing a cryptocurrency exchange. These include ease of registration; ease of site navigation; straightforward depositing and withdrawing; trustworthy payment and withdrawal methods; speed of withdrawal; supported cryptocurrencies; buying and selling limits; security; and the presence of an active community around them, allowing people to get tips and advice from a forum, social media site, and other communities.

Meanwhile, an [OracleTimes Monero article](#) had reported that Crypto Stashed had revealed the best three graphics processing units (GPUs) for mining the Monero (XMR) bitcoin. While Monero is arguably the best privacy crypto coin on the market, mining for this bitcoin can be challenging because of the mining algorithm known as Cryptonight. Because of this, mining the Monero bitcoin requires a miner to have some of the best GPUs for mining. According to Crypto Stashed, the best GPUs for mining Monero are the AMD RX 580, Radeon RX Vega Series, and Nvidia GTX 1080 Titan Series.

It is also important to know that Cryptonight has two versions and that Cryptonight will work on CPUs and GPUs. While CPUs have been usually useless on a conventional mining rig, miners using Cryptonight will have to make the right decision for a CPU/GPU configuration that will work for Cryptonight. It is also important to ensure that the rig has at least 8GB of RAM, which is DDR3 or higher. The motherboard must have sufficient slots for adding GPUs. And the Internet connection must be stable.

And then another important requirement is a piece of good mining equipment, such as the Antminer S9. The S9 is considered to be one of the most powerful miners in the market because of its hash rate of 12.93 TH/s, which ensures approximately \$330 of revenue per month. It has been found to generate approximately 0.33 bitcoins each, although there can be no certainty about rates. However, it is also one of the most expensive mining equipment at \$2100.

Those who would like to know more about cryptocurrency exchanges and related topics can visit the Crypto Stashed website or contact them on the phone or through email. They may also want to join some of the [forums](#) where cryptocurrency is discussed.
