

# Local Plumber in Seattle, WA is Warning Locals Against Side Sewers

December 27, 2019

**Seattle, Wa.**- Old Seattle homes are keeping [plumbers in Seattle, WA](#) very busy as many older homes are having sewer issues. The side sewers around Seattle are starting to break mostly due to age. Most of the homes in the city were built before 1961 and the life of a sewer pipe is usually around 80 years.

Another issue causing the need for [sewer repair in Seattle, WA](#) is the growth of tree roots over time along with changing soil conditions. In Seattle, the homeowners are responsible for side sewer repairs, making it a top priority to know the sewer pipe history when buying a house in Seattle old or new. Side sewers are also becoming a huge headache for homeowners because the pipes can cross many property lines and cause multiple homeowners to be involved in the repair.

Additionally, repairing the many broken sewer lines is no easy task. Kevin Flynn, a Raymark Plumbing & Sewer employee, helped to recently repair some of these broken pipes across the city. According to Mr. Flynn, the rains have been extremely heavy possibly causing the top layer of earth to move which in return would pull the pipe, and once a pipe is broken it can become even worse very quickly.

Should anyone find themselves with a broken side sewer, contact Raymark Plumbing & Sewer. They will be able to provide knowledgeable steps moving forward as they have already been working on side sewer repair across the city. They can be contacted at 206-440-9077 or online at <https://www.raymarkplumbing.com/>. Keeping maintenance on plumbing can drastically ensure that winter months are not going to soil homes and piping throughout homes.
