Chicago Website Design SEO Company Releases Bluehost Uptime Information
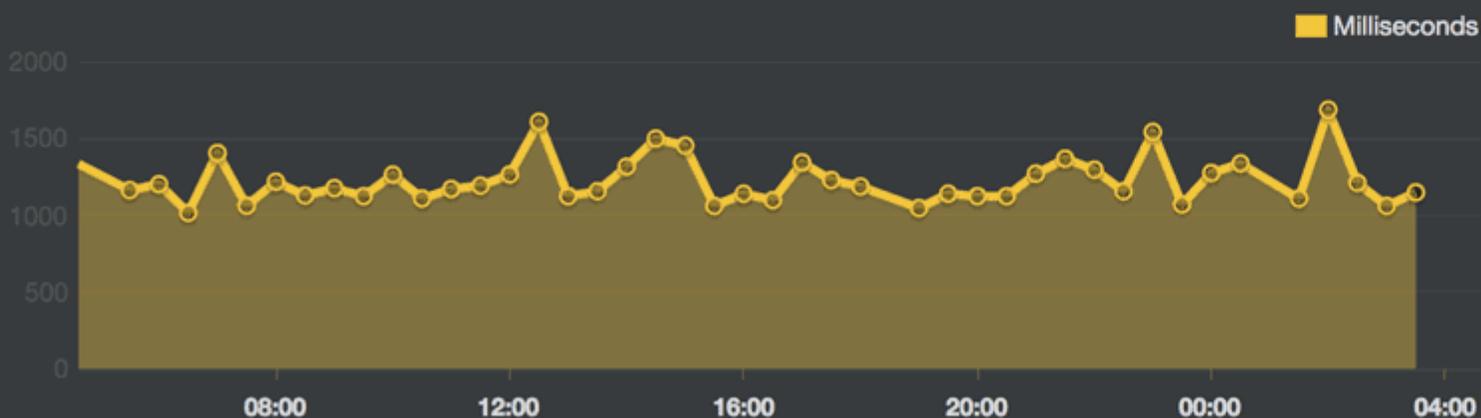

January 29, 2020

[Chicago Website Design SEO Company](#) has been providing SEO services and website design services for years. The company has worked with multiple clients in putting websites at the top of search engine result pages for better online presence and better conversion. Recently, the company has released [Bluehost review](#), a top website hosting company and highlighted important features that the companies have to offer.

According to Chicago Website Design SEO Company founder, Jack Lombardi, "For any website, uptime is crucial. After all, if you have to deal with frequent downtime, your users will not access the site and this will negatively affect your business. Consistent high uptime is one of the major priorities you should be looking for when choosing a website host.

"After being in this industry for a long time, and handling multiple websites, my good uptime starts at 99.94%. While this seems high for most people, it is actually below average. If you work with numbers and hours, you will realize that this means you will have 26 minutes of downtime every month and a couple of hours every year. If you depend on a reliable website to keep your business running, this is a lot of lost business time.

"The good news is that Bluehost surpasses this level and has an average of 99.99% uptime with most of the months in a year having no downtime at all. According to this uptime study, I can conclude that Bluehost is one of the most reliable website hosting companies around."

The review contains more information about the company and a break down of features that can benefit a website in terms of web hosting services.

"We believe that a good website, starts with a good design, professional SEO services and a professional website hosting company that will support your website around the clock," said Lombardi.
